6.1 Proof Compounding Systems - Turn Every Spin Into a Weapon

Elite private strategy - not for redistribution

WAR-ROOM NOTES - 6.1 Proof Compounding Systems

THE PROOF PIPELINE IS THE ONLY DELIBERATE COMPOUNDING MECHANISM

Radio's compounding happens between campaigns, not within them. The pipeline converts one add into four assets - which means each add multiplies the pitch strength of every subsequent send. The amateur's proof decays into memory; the operator's proof re-enters the market weekly. The differential between the two is not talent; it's the pipeline's existence. Build the pipeline once, and every spin forever after is worth five.

SAME-DAY CAPTURE IS NON-NEGOTIABLE

A spin logged a week late arrives with a stale timestamp, no screenshot, no link, no specifics. The proof's specificity - station, show, slot, moment - is what makes it credible to the next PD. Same-day capture turns an event into evidence. "Later" turns it into a story. Stories don't move add decisions.

THE 90-DAY PERISHABILITY RULE

Proof decays perceptually: 90-day-old spins read as "past success," 30-day-old reads as "current momentum," 7-day-old reads as "this is happening now." The refresh cadence (weekly EPK refresh, monthly stack archive) ensures every pitch carries now proof - the single strongest signal you can send a PD. Archive the old proof in a "history" folder; it's valuable for press kits, but it never runs a current campaign.

THE MOMENTUM NARRATIVE (WHY THE DROP WORKS)

A weekly proof drop is a public operating narrative: "this artist ships, grows, and wins, week after week." It works on three audiences at once: PDs (they see a low-risk trending artist), fans (they see a career in motion), and allies (they see a partner worth investing in). The Friday drop costs 20 minutes and produces more third-party narrative than a year of sporadic posts.

THE FIRST-ADD AS COLD-START BREAKER

The first add is the only add that's hard; every subsequent add inherits the proof of the previous one. This is why the first campaign's targeting matters so much (Module 2): the first add is the seed of the entire proof tree. Once the first add is banked and converted, the system's growth curve turns exponential - not because the music changed, but because the evidence started compounding.
