> “What gets measured gets dominated. Airplay is not vanity applause — it is an intellectual property receipt that unlocks six distinct commercial revenue lanes.”

---

1. THE AUDIT ENGINE OPERATING PHILOSOPHY

The greatest financial vulnerability of the independent music sector is **unattributed revenue leakage**. An artist releases a single, secures ten radio adds across three regional markets, experiences a 40% surge in live ticket sales, sees a streaming spike on Spotify and Apple Music, and receives an inquiry from a sync licensing agency — yet fails to correlate any of these commercial events to their broadcast radio airplay.

Because they fail to attribute revenue to broadcast airplay, they view radio promotion as an expense rather than a **high-yield distribution engine**.

The **90-Day Airplay-to-Income Audit Engine** is an institutional governance instrument. It binds your daily broadcast monitoring, weekly outreach pipelines, and quarterly financial statements into a single, unified balance sheet.

2. THE 50-POINT QUARTERLY AUDIT SCORECARD

Every 90 days, allocate 60 minutes to audit your operational performance across five core enterprise dimensions. Score each dimension from 1 (System Failure) to 10 (Elite Execution).

Evaluation Dimension	Score (1-10)	Hard Operational Metrics & Evidence	Identified System Leak	Q+1 Remediation Action Plan
1. Momentum & Discipline	9 / 10	20 War Room stations pitched; 100% Touch 2/3 follow-ups sent	2-day delay on Touch 2 dispatch for Wave 2	Pre-schedule all follow-up drafts on Day 1
2. Reach & Station Adds	8 / 10	6 confirmed adds (30% conversion); 2 specialty features	Zero penetration in Ring 4 corridor	Tighten geographic radius to Rings 1 & 2
3. Revenue Attribution	8 / 10	$8,450 gross across tickets, sync fee, and PRO distributions	PRO live setlists unlogged for 3 club dates	File ASCAP OnStage reports within 48h of gig
4. Relational Capital	9 / 10	100% thank-you emails sent; 6 handwritten cards mailed	Failed to secure direct office phone numbers	Execute Lesson 5.1 Call Sheets next cycle

5. Technical Compliance	10 / 10	Zero broken links; all masters compliant (-14 LUFS / −1 dBTP)	None — technical packaging 100% clean	Maintain standardized file naming protocols
COMPOSITE SCORE	**44 / 50**	**Elite Operator Tier — Sustained Compounding Active**	**Monetization attribution gap**	**Execute 12-Week Release Calendar**

Benchmark Scoring Classifications:

- **40 – 50 Points (Elite Operator):** Maximum compounding efficiency. Re-invest cash flow into regional tour expansion and professional radio servicing.
- **30 – 39 Points (Functional Operation):** Profitable foundation with execution friction in follow-ups or monetization lanes. Tighten weekly calendar blocks.
- **Below 30 Points (System Breakdown):** High operational drag. Halt new spending. Re-audit Module 1 (Command Identity) and Module 4 (21-Day Campaign).

3. DAILY SPIN VERIFICATION LOG

Record every confirmed broadcast spin immediately upon detection. Spinitron timestamp screenshots and audio stream captures must be archived in your `Proof-Stack` directory.

6. THE QUARTERLY ASCENSION PROTOCOL

Upon completing the 90-day audit, review your composite score and execute the ascension directives:

1. **Re-Invest 30% of Attributed Revenue:** Channel at least 30% of radio-attributed income directly into the next campaign’s production, visual assets, and tour routing.
2. **Promote Qualified Allies to the 30/10/10 Portfolio:** Transition every station that added your record into your permanent relationship compounding engine.
3. **Lock the Next Impact Date:** Establish the Tuesday morning launch date for your next single release 12 weeks out.
