MODULE-4 · MASTERCLASS DOSSIER

4.1 The Load Sequence

Lesson masterclass · implementation drills · war-room directive

LEARNING OBJECTIVES

- Arm every station before you fire a single email.
- Set an official impact date and service the record 1–2 weeks ahead.
- Translate a list into a loaded, ready-to-fire campaign.

★ **INSIDER RADIO TIP**

Give the campaign an official impact date and service the record 1–2 weeks ahead of it. PDs are calendar animals — a date converts ‘maybe’ into ‘when?’

THE 21-DAY CAMPAIGN BATTLE RHYTHM

DAYS 1-3 LOAD SEQUENCE	21-DAY	arm every station	
DAYS 4-7 FIRST SENDS · WAVE 1	21-DAY	Tuesday push	
DAYS 8-14 3-TOUCH FOLLOW-UP	21-DAY	value → grace	
DAYS 15-20 ESCALATION WAVE 2	21-DAY	fresh proof re-fire	
DAY 21 AUDIT & LOOP	21-DAY	expand next market	

20 stations · 3 touches · 21 days = the minimum viable empire

MODULE-4 · MASTERCLASS DOSSIER

4.1 The Load Sequence — Arm Every Station Before You Send

[

THE ONE-LINE TRUTH: The first email is not the launch — the Load Sequence is. A campaign executed without passing all seven pre-flight gates will collapse into chaotic improvisation.

MASTERCLASS DIRECTIVE & STRATEGIC BLUEPRINT

Strategic Foundation & Operational Reality

Amateur campaigns fail because they start sending emails the moment a master bounce is exported. An artist writes a pitch on a whim, discovers their streaming link is private, realizes they have no clean radio edit, spends three days chasing an engineer for a master file, forgets who they emailed, and misses follow-up windows.

Professional military operations and enterprise software releases adhere to a strict **Load Sequence**.

Nothing is dispatched to a target station until every operational asset, tracking mechanism, technical file, and calendar block has been fully verified and locked down. When Day 1 arrives, you are not writing copy or designing press kits. You are pulling the trigger on an armed, tested, high-precision system.

The Seven Pre-Flight Operational Gates

Before Day 1 of your campaign, you must achieve 100% green-light verification across all seven gates:

- **Gate 1: Audio Asset Integrity:** Full Broadcast WAV (-14 LUFS, −1.0 dBTP), FCC Clean Radio Edit, 90-Second Audio Weapon, and 30-Second Sweeper Hook exported, named to standard, and ID3 tagged.
- **Gate 2: Command Deck Online:** One-Page EPK live at dedicated clean URL. Zero broken links, mobile page speed verified under 1.5 seconds, instant streaming player functional.
- **Gate 3: 20 War Room Targets Locked:** 20 stations scored >= 75 points, named individual gatekeepers verified, direct email addresses checked, and secondary station contacts logged.
- **Gate 4: 3-Layer Subject Lines Pre-Drafted:** All 20 customized subject lines written, mobile truncation tested (< 45 chars), and assigned to specific target programmers.
- **Gate 5: 90-Word Pitches Staged:** Individual 90-word payloads written and tailored to each programmer’s recent playlist additions and local angles.
- **Gate 6: Campaign Execution Calendar Blocked:** Four 45-minute daily operational execution blocks scheduled and locked in your calendar across the entire 21-day timeline.
- **Gate 7: Post-Add & Thank-You Assets Prepared:** Thank-you email templates drafted, physical station postcards pre-addressed, and social celebration graphics staged.

IMPLEMENTATION DRILLS & PASS STANDARDS

- **Drill 1 — The Seven-Gate System Audit (45 min).** Walk through the Load Sequence Arming Board below. Mark every gate as Pass, Pending, or Fail. Zero sends permitted until all seven gates are marked Pass.
- **Drill 2 — The Broken Link & Permission Sweep (20 min).** Open an incognito browser window on your phone. Click every link in your staged pitches. Verify that audio streams immediately with zero password prompts or login gates.
- **Drill 3 — The Calendar Lockdown Protocol (15 min).** Block out exactly 45 minutes every Monday, Tuesday, Wednesday, and Thursday morning for the next three weeks. Label the blocks: ‘Dominion Campaign Battle Rhythm.’
- **Drill 4 — The Pre-Flight Failure Simulation (15 min).** Identify your single most vulnerable operational bottleneck (e.g., slow email response time, missing clean lyrics, unverified gatekeeper email) and execute an immediate contingency fix today.

ACTION WORKSHEET & OPERATIONAL PROTOCOL

Protocol Document: `THE SEVEN-GATE LOAD SEQUENCE ARMING BOARD`

Complete the structured table below as part of your lesson implementation. This worksheet directly replaces legacy spreadsheets with a publication-grade execution protocol.

Gate Number & Asset	Operational Standard	Verification Status	Blocker / Deficiency	Remediation Action Plan
Gate 1: Audio Deliverables	WAV, Clean Edit, 90s Weapon, 30s Hook	PASSED	None	Files staged in private Dropbox
Gate 2: Command Deck EPK	Responsive URL, <1.5s load, zero dead links	PASSED	None	Verified on desktop & mobile iOS

Gate 3: 20 Scored Stations	20 stations scored >= 75 pts with named MD	PASSED	None	All 20 contacts verified via Spinitron
Gate 4: 3-Layer Subject Lines	20 tailored lines, < 45 chars mobile	PASSED	None	Pre-loaded in campaign drafts
Gate 5: Staged 90-Word Pitches	Personalized copy, single clear ask	PASSED	None	All drafts reviewed under 90 words
Gate 6: Calendar Blocks Locked	4x 45-min weekly execution blocks	PASSED	None	Synchronized in Google Calendar
Gate 7: Gratitude Pipeline Staged	Thank-you drafts & physical cards ready	PASSED	None	Station studio addresses logged

WAR-ROOM NOTES

WAR-ROOM DIRECTIVE — 4.1 The Load Sequence — Arm Every Station Before You Send

THE T-MINUS 48 HOUR LOCKDOWN

Forty-eight hours prior to Day 1, declare a total **Code Freeze**.

- No more tweaking the vocal mix.
- No more altering the master EQ balance.
- No more redesigning the album artwork.
- No more changing the EPK typography.

Perfectionism at T-48 hours is a psychological defense mechanism driven by fear of market rejection. The record is done. The packaging is frozen. The weapons are armed. Trust the engineering and execute the sequence.

FREQUENCY DOMINION COMMUNITY DRILLS

1. Post your completed Seven-Gate Arming Board showing 100% Passed status across all gates.
2. Share the date and time of your scheduled Day 1 launch.
3. What was the most critical deficiency you identified and corrected during your pre-flight audit?
4. Affirm that your calendar execution blocks are locked and non-negotiable.

Key Takeaways

REMEMBER THIS

- Fire only armed stations.
- An impact date converts ‘maybe’ into ‘when?’
- Service 1–2 weeks ahead of the add.

Self-Assessment · Check Your Mastery

PASS BEFORE YOU MOVE ON

- 1. Is every target station loaded and armed before send?
- 2. Do I have an official impact date set?
- 3. Did I service the record 1–2 weeks ahead of that date?
